Conifer Wireless Announces a New Series of HLN Downconverters for EBS and BRS Operations

Tempe, AZ February 24, 2005 Conifer Wireless, a subsidiary of Wireless Acquisition LLC, announces a first to market solution for EBS systems utilizing the new FCC Rule Part 27 band plan. Conifer has developed proprietary technology into a series of new HLN downconverters designed to work in the harsh two-way digital and broadcast environment created by the adoption of new Band Plan rules by the FCC. Taking into consideration rigorous filtering requirements made necessary by the way the band has been repartitioned, the new HLN downconverters meet or exceed all aspects of the downconverter specifications as specified in the FCC's new rules.

Jim Yard, Chairman and CEO for Conifer Wireless says, "We used our 25 plus years of experience in manufacturing ITFS and MMDS downconverters to design the new HLN series to not only exceed the specifications outlined in the new rules, but to also be acceptable to the EBS/BRS licensees in the band. We worked closely with a number of these licensees and operators over the last year to develop the right product. Our introduction of the new HLN products at the NIA conference in San Diego last week was very well accepted. This product line represents another first to market solution for Conifer."

Conifer has introduced the HLN2.5, HLN3.0 and HLN4.0. All models work in the new EBS/BRS band plan and the HLN2.5 is also designed to work in the previous ITFS/MMDS band plan. All models utilize embedded microprocessor designs and Conifer's patented Inter-Digital Filter Technology. All can be tuned to specific user output frequencies. The HLN4.0 can be field tuned using a built-in laptop computer interface.

About Conifer Wireless: Conifer Wireless (www.coniferusa.com) is a leading global provider of subscriber products for broadband wireless systems. Conifer delivers point-to-point and point-to-multipoint solutions, including active and passive subscriber equipment for both licensed and un-licensed service providers. Conifer provides solutions that support video, voice, and data. Conifer's product portfolio spans the frequency spectrum of 1.7 to over 6 GHz. Over one million subscriber equipment packages, sporting the Conifer brand, have been installed in over 60 countries worldwide.

About Wireless Acquisition LLC: Wireless Acquisition (www.e-wti.com) is a privately held telecommunications technology investment, management, and development company working with strategic sellers to acquire under managed or underperforming businesses that provide mission-critical telecommunications solutions and services. The selection criteria requires that these businesses have a recurring revenue base and have an existing customer base with long term and favorable relationships. Their strategy is to assemble a complete portfolio of equipment and systems to provide wireless service providers with a one-stop source for video, voice and data networking systems. Their portfolio includes companies and product lines that represent presence in over 100 countries worldwide, and which products and services are utilized by over one million end user customers.
